Waitlister Pricing

✅ **Why these numbers work psychologically**

- **Premium $2.99 / Pro $5.99**
- **Premium $3.99 / Pro $7.99**

Magic-link activation (prevents forwarding)

Your launch email should **not** link to a public pricing page.

Instead:

- Each recipient gets a **unique, expiring magic link**
- Link auto-tags them as eligible
- Forwarding the email won't work for others

Best practice

- Link expires after **7 days**
- Can be reused by the same email
- Can't be shared across accounts

Server-side price enforcement (never trust UI)

- Even if someone manipulates the front-end:
- The server must **re-validate eligibility at checkout**
- Stripe (or equivalent) price IDs must be locked per user
- **This is critical for investor-safe pricing.**

Founding badge + internal flag

Once someone subscribes:

- Tag them permanently as founding_member
- Show subtle UI recognition (later)

5️⃣ **Hard stop after Day 14**

Even eligible users lose access after the window closes.

This protects:

- Brand integrity

- Pricing clarity
- Future launches

Final system overview (one-page mental model)

- **Eligibility Source**
